EXPERIENCE

SenseHQ, Bengaluru, India

Lead Software Engineer

Jun 2021 – Present

Apr 2025 – Present

- Reduced production Voice AI **cost per call by 30%** through pre-generated screening questions, explicit prompt caching, and conversation-stage LLM routing.
- Built a Snowflake-based cost attribution and alerting pipeline for Retell, LLM, and TTS billing, with component-level budget thresholds and spend-anomaly detection across **~2M monthly calls** and **100+ voice agents**.
- Deployed voice-agent regression testing using Arize, eight LLM-as-judge evaluators, conversation replay suites, CI release gates, and production sampling; identified **4 prompt defects** missed by manual QA.
- Architected multi-tenant OpenSearch indexing across **~1B records**, introducing size-tiered shared/dedicated indices and alias-based migrations; reduced typeahead **p95 latency 25×** (2.5s → 100ms).
- Built Jiraffe, a RAG support agent used across engineering teams for **~50 tickets/day**; integrated code, logs, databases, and monitoring via MCP, cutting root-cause analysis from days to hours and helping lift **SLA to 95%+**.
- Optimized RDS and OpenSearch infrastructure through query tuning, schema migrations, and shard consolidation (32 → 2); reduced RDS peak CPU from **90% to below 50%**, enabling database and search cluster downsizing.
- Owned critical backend services including SMS/WhatsApp messaging (**~4M messages/day**), notifications, and shared language infrastructure; led architecture and delivery for a five-engineer team.
- Led production incident response for critical messaging services, resolving Kafka consumer backlogs, rebalance crash loops, database saturation, and Twilio failures; added retry topics and dead-letter queues for reliable recovery.

Senior Software Engineer

Jul 2022 – Apr 2025

- Scaled bulk messaging from **500 to 100K recipients** per broadcast using Kafka (500-partition outgoing topic), distributed consumers, SQS FIFO, and autoscaled ECS workers; processed 100K messages in **~30 seconds** and reduced API p99 latency from **13s to 1.5s**.
- Built end-to-end observability for Kafka, SMS providers, and delivery pipelines (StatsD, Datadog, Grafana) across 80% of messaging workflows, tracking consumer lag, delivery failures, end-to-end/per-service latency, and SLAs.
- Built LLM-based abuse detection after a credential-compromise incident: accounts exceeding five messages/minute get recent content classified; spam accounts are auto-blocked with internal and customer alerts.
- Migrated internal tools from Retool to self-hosted Lowcoder, saving **\$50K+/year** in licensing costs.
- Fixed a Redis session leak causing recurring mobile logouts, reducing **session storage 80%+** (20GB → under 4GB).

Software Engineer

Jun 2021 – Jul 2022

- Automated internal workflows and data migrations, reducing manual operations from four days to a few hours.

SELECTED PROJECTS

Blindspot – AI-Powered Fact-Checking Platform

[blindspot.buzz](#)

Python, Next.js, Whisper, FFmpeg, LLMs

- Built a pipeline for short-form video transcription, claim extraction, evidence retrieval, claim-level evaluation, and cited reporting; cut processing to **\$0.0215 per report** via stage-level budget controls and idempotent execution.

ScamDB – Community Fraud Intelligence Platform

[scamdb.in](#) | [GitHub](#)

Next.js, Python, PostgreSQL, Redis

- Built a searchable fraud intelligence platform indexing **~10K** reported Indian phone numbers and UPI IDs, with scheduled ingestion, OCR and LLM-based extraction, deduplication, moderation, and source provenance.

TECHNICAL SKILLS

Languages: Python, Golang, TypeScript/JavaScript, SQL

Backend & Distributed Systems: Node.js, FastAPI, Flask, Kafka, SQS, Redis, REST APIs, WebSockets

Databases & Search: MySQL, OpenSearch, Elasticsearch, PostgreSQL, MongoDB, Snowflake

Cloud & Infrastructure: AWS (ECS, EC2, Lambda, RDS), Docker, Terraform, CI/CD, Datadog, Grafana

Applied AI: Voice AI, LLM Orchestration, RAG, MCP, Arize, Retell, LiveKit

EDUCATION

Indian Institute of Science Education and Research (IISER), Bhopal

2017–2021

B.S. in Electrical Engineering and Computer Science (EECS)
